**SET UP**  
Spread shelter out. Adjust trekking poles (not included) to between 120-125cm. Loosen all stake out adjustment points. Components include shelter, gylines, J-stakes.

- Stake out 4 main corners in an even rectangle. Secure plastic door buckle.
- Stake out 2 edge points between corners to form a hexagon shape.
- Insert trekking pole through open door. Carefully place tip into metal cap of front cone. Repeat for back cone. If shelter is being used without ground cloth, place trekking poles handle side up.
- Tension 6 perimeter points until wrinkling is removed and shape is symmetric.
- If conditions warrant, stake out 4 mid-panel points. Do not over tension and deform shape.
- Adjust trekking pole length as necessary.
- From the inside, place gear on edge of mesh skirt to seal against insects.
- In strong winds, secure buckle at base of door after entering or exiting shelter. Door may be rolled back and secured with toggle.

**VENTILATION**  
Maintain adequate ventilation at all times. For more ventilation pitch shelter higher off the ground by loosening stake-outs and lengthening center pole.

**ATTACHING OPTIONAL GROUND CLOTH**  
Place ground cloth under shelter and hook elastic loops to stakes used for set up. Secure plastic toggles to corresponding webbing loops on the edge of the mesh skirt.
